

# 过程

先, conda install nb\_conda , 错误, 原因是python version>=3.9

- 先试了一下pip install notebook, **不行**;
- 在虚拟环境里配置了python3.8
- 返回第一步, **ERROR** conda.core.link:\_execute(945): An error occurred while installing package 'defaults::nb\_conda-2.2.1-py38\_1'.
- 尝试清华镜像下载: pip install jupyter notebook -i <https://mirrors.tuna.tsinghua.edu.cn/> **ERROR**: Could not find a version that satisfies the requirement jupyter (from versions: none) ERROR: No matching distribution found for jupyter
- **注意: 下载时一定不能翻墙 (后来看到有人说是因为网速太慢/开了梯子)**
- 死马当活马医: pip install jupyter **下载成功** (还没完! )  
测试安装是否成功: jupyter notebook
- **ERROR1:**

```
(pytorch) C:\Users\l0ading>jupyter notebook
Traceback (most recent call last):
  File "C:\Users\l0ading\anaconda3\envs\pytorch\lib\runpy.py", line 194, in _run_module_as_main
    return _run_code(code, main_globals, None,
  File "C:\Users\l0ading\anaconda3\envs\pytorch\lib\runpy.py", line 87, in _run_code
    exec(code, run_globals)
  File "C:\Users\l0ading\anaconda3\envs\pytorch\Scripts\jupyter-notebook.EXE\__main__.py", line 4, in <module>
  File "C:\Users\l0ading\anaconda3\envs\pytorch\lib\site-packages\notebook\app.py", line 17, in <module>
    from jupyter_server.serverapp import flags
  File "C:\Users\l0ading\anaconda3\envs\pytorch\lib\site-packages\jupyter_server\serverapp.py", line 104, in <module>
    from jupyter_server.services.contents.filemanager import (
  File "C:\Users\l0ading\anaconda3\envs\pytorch\lib\site-packages\jupyter_server\services\contents\filemanager.py", line 21, in <module>
    from anyio.to_thread import run_sync
  File "C:\Users\l0ading\anaconda3\envs\pytorch\lib\site-packages\anyio\__init__.py", line 5, in <module>
    from ._core._eventloop import current_time as current_time
  File "C:\Users\l0ading\anaconda3\envs\pytorch\lib\site-packages\anyio\_core\_eventloop.py", line 16, in <module>
    from typing_extensions import TypeVarTuple, Unpack
ModuleNotFoundError: No module named 'typing_extensions'
```

- 重新下载: 输入

```
1 pip install notebook
2 //显示所有文件requirement already satisfied
3 pip install typing_extensions//下载他说找不到的模块
4 //显示requirement already satisfied
```

缺失模块SOLUTION:

1. pip install typing-extensions== 4.5.0 (查的)
  2. 在everything里搜模块名, 复制对应文件夹到他显示的那一串文件夹名字的lib文件夹里
  3. 先upgrade pip: python -m pip install --upgrade pip
- 下面代码不能直接复制, 请根据自己的实际文件夹路径不同进行修改

```
1 python.exe所在的文件绝对路径 -m pip install --target=pytorch所在文件夹路径  
lib\site-packages --upgrade pip
```

然后用

```
1 python.exe所在的文件绝对路径 -m pip install --target=pytorch所在文件夹路  
径\lib\site-packages\lib\site-packages urllib3  
2 //（不同的模块只需要改变最后这个模块名）
```

4. **ERROR2** Exception: You need either charset\_normalizer or chardet installed  
**solution** python -m pip install requests chardet

5. **ERROR3**

(pytorch) C:\Users\l0ading>jupyter notebook[C 2024-01-25 18:23:30.085  
ServerApp] Bad config encountered during initialization: The  
'kernel\_spec\_manager\_class' trait of <jupyter\_server.serverapp.ServerApp object  
at 0x000002421D9E3730> instance must be a type, but  
'nb\_conda\_kernels.CondaKernelSpecManager' could not be imported

**解决方法** [【jupyter报错】'nb\\_conda\\_kernels.CondaKernelSpecManager' could not be imported\\_bad config encountered during initialization: the -CSDN博客](#)
